$$\therefore \chi^2 = \frac{(10 - 6.68)^2}{6.68} + \text{etc}$$

$$= 1.6501 + 1.7740 + 3.3203 + 4.5018 + 0.4015 + 0.8135$$

$$= 12.46(12)$$

d.o.f. = 6 - 3 = 3

Refer to χ^2_3 .

Upper 5% point is 7.815

12.46 > 7.815 \therefore Result is significant.

Seems the Normal model does not fit the data at the 5% level.

E.g.

- The biggest discrepancy is in the class $1.01 < a \leq 1.02$
- The model overestimates in classes ..., but underestimates in classes ...

M1 Combine first two rows.
